

1.3.1: The Institution integrates cross-cutting issues relevant to gender, environment and sustainability, human values, health determinants, Right to Health and emerging demographic issues and Professional Ethics into the Curriculum as prescribed by the University / respective regulative councils

Sincere efforts are being made by Shri Chamundamata Homoeopathic Medical College & Hospital to include gender equality, nature and sustainability, human values, and professional ethics into the curriculum in order to foster the development of ambidextrous personalities. When it comes to opportunities, both male and female students are provided with equal possibilities. Participants are inspired to take part in a variety of programmes by the teaching staff. The Vishakha committee is established in order to address concerns about the well-being of women and to ensure their safety. By providing students with instruction in a variety of modules that are connected to the subject matter, such as gender and social equality, the students are encouraged to develop these values. The Ruhi Book and Trellis Workshop, which focuses on the environment and sustainability Students are made aware of the dangers that are presented by climate change, seasonal deregulation, ecological distortion, bio diversity and its social and economic repercussions, and a variety of environmental risks via the organisation of a number of different kinds of seminars, workshops, and environment days. Through excursions to a dairy farm, a water filtration plant, a tree plantation, a vanmohatsav programme, a swachata abhiyaan, a conserve water initiative, a solar system, and an electric car charging station, students are exposed to ideas and concepts about sustainability and development.

Principles of Humanity The human ideals that set humans apart from the animal world are the foundations of humanity. M(N)HMC's mission is to provide a nurturing environment for aspiring homoeopaths and to help them develop into almost ideal human beings who are able to identify their own personal reason for attending the prestigious medical profession. In the area of ethical education, the Trellis Institute Nasik hosts a workshop. pupils are able to relearn human values and subsequent traits via the Ruhi Book 1 interactive workshop, which is another effort of this kind that aims to develop and enlighten pupils.

In order to better assist patients, students in the professional ethics programme get training in professional ethical standards beginning in their first year. Medical jurisprudence is a subject that is taught to students in their second year. During the third and fourth years, they are responsible for capturing patient data in the most scientific and courteous way possible. This is part of the process of developing their soft skills. During their internships, students put their principles into practice.

Contributing Factors to Health A person's state of mind, which is reflected in their behaviour pattern, the impact of social variables on the mind and body, and the effect of biological and non-biological elements on the human body are all aspects that should be considered when determining the individual's overall health. Our small campus, which is equipped with the most basic facilities, is characterised by an atmosphere that is characterised by peace, mutual respect, and a positive outlook. Students have access to many modes of transportation. During the first year of school, the strengths of each individual kid are improved via assessment. **A Right to Health Care** Every human person, regardless of their caste, colour, or gender prejudice, has the basic right to a full and comprehensive state of health. A number of cutting edge medical services, including X-rays, electrocardiograms, sonography, indoor admission, and outpatient clinics, are provided at no cost to patients. In addition to having access to clean drinking water, well-ventilated classrooms, bathrooms, a recreational space, and fresh, sanitary food in the college cafeteria, boarding students are also supplied with these amenities. **Emerging problems relating to demographics** It is important to take into account new concerns, such as those pertaining to women's health, cancer, TB, water and airborne infections, and pandemics like the Covid virus. In the guise of medical, mother-child health, and cancer camps, a number of different programming are brought together.
